

SOI BULLETIN

A QUARTERLY STATISTICS OF INCOME REPORT

Volume 44 | Number 4

The *Statistics of Income (SOI) Bulletin* is issued quarterly by the Statistics of Income Division of the Internal Revenue Service. This report provides written descriptive analyses of statistics previously released on SOI's Tax Stats webpage (see www. irs.gov/statistics) based on the data collected from the distinct types of tax and information returns filed with the IRS and included in SOI's programs. Periodically, this report also includes results from special analytical studies of particular interest to students of the U.S. tax system, tax policymakers, and tax administrators. Selected historical and other data tables, previously published in the spring issue of the SOI Bulletin are now only available on SOI's Tax Stats webpages of the IRS website (https:// www.irs.gov/statistics/soi-tax-stats-historical-data-tables). Information on the availability of supplemental data on the topics included in this issue or other SOI subjects, may be obtained by sending an email to SOI's Statistical Information Services at sis@ irs.gov, or by writing to the Director, Statistics of Income Division OS:RAAS:S, Internal Revenue Service, 1111 Constitution Avenue, NW, K-Room 4112, Washington, D.C. 20224.

The SOI Bulletin was prepared under the direction of Wayne Kei, Chief, Data Dissemination Section. Lisa Smith and Daniel Martinez (layout and graphics editors) prepared the manuscript. Spencer Adams (writer/editor) and Beth Kilss (contractor) also made major contributions in the production of this issue. Views expressed in the article are those of the author(s) and do not necessarily represent the views of the Treasury Department or the Internal Revenue Service.

NOTE: When using information from this report, cite the publication as follows— Internal Revenue Service Statistics of Income Bulletin Spring 2025 Washington, D.C.

Inside This Issue

Sole Proprietorship Returns, Tax Year 2022

2

70

by Adrian Dungan and Adam Snyder

Business receipts for the 31.0 million returns with sole proprietorship activity for TY 2022 increased by 11.4% from TY 2021 to a level of \$2,080 billion. The largest industrial sector, based on business receipts, was the construction sector, accounting for \$377.1 billion in business receipts. The wholesale trade sector had the largest percentage increase in returns (14.4%), while the arts, entertainment, and recreation sector had the highest percentage increase in receipts (24.4%). Total nonfarm sole proprietorship profits for 2022 decreased 0.2% to \$410.7 billion. The professional, scientific, and technical services sector had the largest profits of any sector, at \$101.6 billion, representing 24.7% of total sole proprietorship profits, followed by the construction sector, at \$54.2 billion or 13.2% of total profits.

High-Income Tax Returns for Tax Year 2021

by Justin Bryan

For Tax Year 2021, there were just under 11.7 million individual income tax returns with an expanded income of \$200,000 or more, accounting for 7.3% of all returns filed for the year. Of these, 9,861 returns had no worldwide income tax liability, resulting in a 6.0% increase over the number of returns with no worldwide income tax liability for 2020. It was just the third increase in a row, but well below the peak of 19,551 returns for 2009.

Sole Proprietorship Returns, Tax Year 2022

by Adrian Dungan and Adam Snyder

or Tax Year (TY) 2022, there were approximately 31.0 million individual income tax returns that reported nonfarm sole proprietorship activity, a 5.7% increase from 2021. Total receipts reported by nonfarm sole proprietorships increased 11.4%, while deductions increased 14.7%, and profits fell 0.2% to \$410.7 billion in 2022. In constant dollars, total receipts rose by 4.0%, deductions rose by 7.0%, and profits decreased by 6.8%. Total profits as a percentage of business receipts went from 22.0% in TY 2021 down to 19.7% in TY 2022, the lowest it has been since 1990. The professional, scientific, and technical services sector remained the sector with the largest share of profits at 24.7% with profits increasing by 2.5% to \$101.6 billion. Half of the sectors saw increases in profits, with the largest percentage increase in the arts, entertainment, and recreation sector, which increased 15.0% to \$15.0 billion.

The construction sector reported the largest percentage of total business receipts (18.1%) and total business deductions

(19.3%). The arts, entertainment, and recreation sector reported the largest percentage increase in business receipts (24.4%) and the construction sector experienced the largest dollar increase in business receipts, increasing by \$57.1 billion.

Returns and Receipts

For all nonfarm sole proprietorship industries, total business receipts (the sum of "income from sales and operations" and "other business income") increased 11.4%, from \$1,868.0 billion to \$2,080.7 billion (Figure A).¹ Between TYs 2021 and 2022, the number of individual income tax returns reporting nonfarm sole proprietorship activity increased 5.7% to 31.0 million (Figure A).² The wholesale trade (merchant wholesalers) sector had the largest percentage increase in the number of returns among all sectors, increasing 14.4% for TY 2022 following a 9.3% rise in TY 2021.

[1] Total business deductions are calculated before subtraction of nonallowable "passive" activity losses and inclusion of any "passive loss" carryover from prior years NOTES: Detail may not add to totals because of rounding. Percentages were calculated before rounding.

SOURCE: IRS, Statistics of Income Division, Sole Proprietorship Returns, November 2024.

¹ Statistics for "business receipts, total" in Table 2 represent the total receipts of the business, mainly gross receipts from sales and operations. Business receipts also include miscellaneous business receipts, such as incidental sales of scrap, shown separately as "other business income." However, business receipts exclude incidental investment income received through the business. Examples of such incidental investment income are interest, dividends, income or loss from rents or royalties, and capital or ordinary gain or loss from the sales of investment and business properties. Sole proprietors report incidental investment income, in combination with nonbusiness related investment income, as part of their total income on their individual income tax returns.

² For TY 2022, the 30,980,966 nonfarm sole proprietorship returns accounted for an estimated 35,255,144 nonfarm businesses. For purposes of these statistics, if a proprietor owned more than one business, the statistics for each business were combined with those of the proprietor's dominant business and included in the industrial group for that business activity. When this occurred, the sum of net incomes (for businesses reporting a positive net income) reduced by the sum of net deficits (for businesses reporting a deficit) yielded the profits for a specific industrial group.

The North American Industry Classification System (NAICS) was used to classify data by industries. The Statistics of Income (SOI) Division applied these classifications on a "per business" (rather than on a "per establishment") basis by combining various industry groups, although businesses were further combined as described above. While the wording of the industry titles used for the sole proprietorship statistics diverge somewhat from those appearing in NAICS, the definitions are consistent.

NAICS for industrial coding was introduced in 1998. Prior to 1998, industries were classified using the Standard Industrial Classification (SIC). Due to coding changes, comparisons between data by industry from 1998–2022 with 1997 and prior years may show inconsistencies. A reason for this is that several types of sole proprietorships under NAICS were classified in completely different industrial groups, which makes prior-year comparisons under the SIC system inappropriate. For example, in 1997, finance, insurance, and real estate were classified as one industry under the SIC system, while under the NAICS system, the group is split into two industrial sectors. The industrial sectors based on the NAICS codes are reported in Tables 1 and 2.

The number of returns for the subsector of the transportation and warehousing specific to Taxis, limousines, and other ridesharing services rose by 4.7%, while the business receipts in this subsector increased by 34.6%. Between TYs 2013 and 2022, the average business receipts per return in this subsector (taxis, etc.) fell from \$36,420 to \$33,023, although the 2022 average was the highest for this group since 2013 (Figure B).

The administrative and support and waste management services and the construction sectors had relatively large percentages of profits accounted for by returns with business receipts of less than \$100,000. In the administrative and support and waste management services sector, 93.7% of returns had

business receipts less than \$100,000; these returns accounted for 53.1% of the sector's total profits. For the transportation and warehousing sector, 88.3% of the returns had business receipts of \$100,000 or less; these returns accounted for 43.1% of total profits while the construction sector had 79.7% of such returns, accounting for 38.3% of its total profits (Figure C). Conversely, the wholesale trade (0.7%), the finance and insurance (8.5%) and retail trade (-7.2%) sectors had much lower percentages of profits accounted for by returns with business receipts of \$100,000 or less. The professional, scientific, and technical services sector and the transportation and warehousing sector had the largest number of returns with business receipts less than

Net income	184,268	157,444	337,574	397,116	506,525	361,979	[4]	[4]	[4]	[4]

^[1] Includes returns with Schedule C-EZ attached. Schedule C-EZ was filed for certain small businesses, i.e., those with net incomes, business expenses of \$5,000 or less, used the cash accounting method, with no inventories or employees, and with no deduction for a home office business and no allowable "passive" activity losses. Because only a total is reported for business deductions on Schedule C-EZ, the totals shown in the statistics exceed the sum of the detailed deductions; the detailed deductions are, therefore, slightly understated.

NOTE: Detail may not add to totals because of rounding.

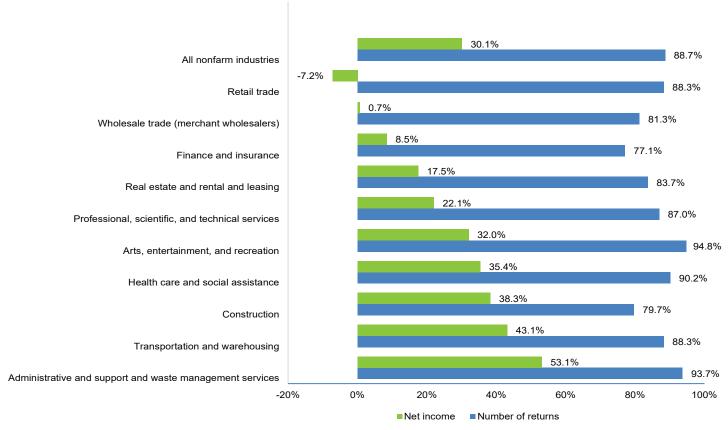

^[2] Total business deductions are before subtraction of nonallowable "passive" activity losses and any "passive boss" carryover from the prior years. However, these losses (after subtraction) and any carrryover are reflected in net income or deficit. Therefore, total business receipts minus total business deductions may not always equal net income or deficit.

^[3] Total business deductions will not be equal to the total as items with an estimate based on a small number of sample returns have been removed

^[4] Schedule C-EZ was eliminated for Tax Year 2019 in accordance with the 2017 Tax Cuts and Jobs Act.

SOURCE: IRS, Statistics of Income Division, Sole Proprietorship Returns, November 2024.

Figure C
Nonfarm Sole Proprietorships: Percentage of Industry's Total Returns and Total Net Income for Returns With Business Receipts
Equal to or Less Than \$100,000, by Selected Industry, Tax Year 2022

SOURCE: IRS, Statistics of Income Division, Sole Proprietorship Returns, November 2024.

\$100,000 with 3.4 and 3.3 million returns, respectively. Overall, returns with business receipts of \$100,000 or less comprised 88.7% of all sole proprietor returns, but earned just 30.1% of the profits.

The arts, entertainment, and recreation sector showed the largest percentage increase in business receipts, increasing 24.4% to \$64.0 billion for TY 2022. The wholesale trade sector experienced the second largest percentage increase in business receipts, increasing by 18.1% to \$75.5 billion. In constant dollars, total business receipts for TY 2022 experienced a modest percentage increase compared to the 35 years covered in this study, growing by 4.0% to \$1,762.9 billion (in 2017 dollars, Figure D).³

Deductions

Total business deductions ("cost of sales and operations" plus business expenses, including expenses for home offices) in current dollars increased 14.7%, from \$1,458.0 billion in TY 2021 to \$1,671.9 billion in TY 2022 (Figure A).^{4,5} In constant dollars, total business deductions increased 7.0% in 2022 (Figure D).

Deductions for the construction sector, the largest sector in terms of total business deductions, increased 19.8%, from \$269.6 billion in 2021 to \$322.9 billion in 2022. The arts, entertainment, and recreation sector had the largest percentage increase of total business deductions, increasing 27.4% to \$49.2 billion.

³ Based on the overall implicit price deflator for Gross Domestic Product. See U.S. Department of Commerce, Bureau of Economic Analysis, Survey of Current Business. Indices used for this article can be found in Figure L.

⁴ Sole proprietors report personal, i.e., nonbusiness income and expense items, apart from business income or loss, which is reported on Profit or Loss From Business (Schedule C). Salaries paid to owners are neither deducted as wages paid on Schedule C nor included as wages received on Form 1040, U.S. Individual Income Tax Return. Similarly, sole proprietors deduct charitable contributions made through the business as personal expenses on Schedule A, Itemized Deductions. However, the owner of a sole proprietorship may choose to deduct any foreign taxes paid as a business expense, unless the owner elects to claim these taxes as a credit against U.S. income tax.

⁵ Business deductions include the home office business deductions. After 1990, home office expenses were calculated separately on Form 8829, Expenses for Business Use of Your Home and the deductible portion brought forward to Schedule C. In some cases, these expenses were limited. Starting in TY 2013, sole proprietors could also use a simplified method to determine these costs by reporting on Schedule C square footage (up to 300 square feet) used for the home office. The taxpayer could then take \$5 per square foot as a business expense. Prior to 1990, these expenses were not limited and were included with other expenses, such as depreciation deductions, utilities, and "other" expenses on Schedule C.

^[1] Total business deductions are calculated before subtraction of nonallowable "passive" activity losses and any "passive loss" carryover from prior years. However, these losses (after subtraction) and any carryover are reflected in net income less deficit. Therefore, total business receipts minus total business deductions may not always equal net income less deficit.

SOURCE: IRS, Statistics of Income Division, Sole Proprietorship Returns, November 2024.

The cost of sales and operations represented 34.7% of total TY 2022 business deductions (\$580.2 billion) (Table 2). Total business "expenses" (total business deductions minus the cost of sales and operations) were \$1,091.8 billion for 2022.

Historically, constant dollar depreciation increased almost every year from 1993 through 2003.⁶ Between TYs 2004 and 2009, constant dollar depreciation dropped significantly, going from \$54.3 billion to \$39.0 billion. In TY 2012, it dropped to \$36.7 billion, but subsequently climbed back to \$42.1 billion by 2017 (Figure E). Increases in TYs 2003 and 2008 coincided with legislative changes to Section 179 of the Internal Revenue Code (IRC) that substantially increased the amount of certain investment property that could be expensed in a given year

rather than depreciated over time. Under the Jobs and Growth Tax Relief Reconciliation Act of 2003, the maximum allowable Section 179 deduction vaulted from \$24,000 in 2002 to \$100,000 in 2003. This change led to a constant dollar depreciation increase of 11.7% for 2003, which was the third highest growth in depreciation of any year between TYs 1988 and 2021. The initial increase in depreciation was followed by trends of decreased depreciation, which is consistent with deductions being accelerated into the year of expensing. Constant dollar declines of depreciation were reported for TYs 2005, 2006, and 2007. This downward trend was particularly pronounced in 2005, as constant dollar depreciation fell by 11.7%, followed by decreases of 3.2% in 2006 and 1.0% in 2007. During this

^[2] Current dollars are the value of a dollar at the time it was measured. Constant dollars are based on the overall implicit price deflator for gross domestic product computed and reported by the U.S. Department of Commerce, Bureau of Economic Analysis, in the Survey of Current Business. The deflator represents the annual average of current-weighted prices, based on 2017 = 100.

^[3] Not calculated.

^[4] Less than 0.05%.

NOTE: Percentages were calculated before rounding.

⁶ Under IRC Section 179, the cost of certain tangible property may be treated as a current expense rather than a capital expenditure subject to depreciation deductions. The Omnibus Budget Reconciliation Act of 1993 (OBRA93) increased the maximum amount of investment that could immediately be deducted on property placed in service after 1992, from \$10,000 to \$17,500. The increase in the constant dollar depreciation deductions for 1993, and subsequent decline in 1995, may be attributed, in part, to this provision of OBRA93. Following the enactment of this provision, the 179 deduction for all individuals (not just sole proprietors) filing Form 4562, Depreciation and Amortization, increased 32.4% to \$13.5 billion for 1993.

same three-year period, Section 179 limits gradually increased for inflation, finally rising to \$125,000 in 2007.⁷ In 2008, the Section 179 limit was doubled to \$250,000 and there was a 2.6% increase in constant dollar depreciation. The \$250,000 limit remained for TY 2009 and depreciation dropped 17.2%, which was the largest decrease since at least 1988. In TY 2010, the Section 179 limit was again doubled to \$500,000, but constant

dollar depreciation increased by only 0.5%, from \$39.0 billion to \$39.2 billion. The limit was increased as part of the stimulus packages created in response to the Great Recession. The Section 179 limit remained \$500,000 for TYs 2011 through 2017. For 2011, constant dollar depreciation dropped by 0.7%; in 2012 it dropped another 5.6% to \$36.7 billion, the lowest level over the 35 years of this study. The Tax Cuts and Jobs Act

^[3] Not calculated.

^[4] Less than 0.05%

NOTE: Percentage changes were calculated before rounding.

⁷ Under the Jobs and Growth Tax Relief Reconciliation Act of 2003, the maximum amount of a Section 179 deduction increased four times between 2002 and 2006, from \$24,000 (2002) to \$100,000 (2003) to \$102,000 (2004) to \$105,000 (2005), and then to \$108,000 (2006). This was further expanded to \$125,000 for 2007 by the Small Business and Work Opportunity Tax Act of 2007 (PL 110-28). The Jobs Creation and Worker Assistance Act of 2002 introduced 30% bonus depreciation, and the Jobs and Growth Tax Relief Reconciliation Act of 2003 increased the bonus percentage to 50% for property placed in service by January 1, 2005. While bonus depreciation was available to sole proprietors, it was generally not as advantageous as immediate expensing and, therefore, likely had less effect on their depreciation deductions.

For 2008, the Economic Stimulus Act of 2008 increased the maximum expensing deduction under Section 179 to \$250,000. The American Recovery and Reinvestment Act of 2009 extended that level through 2009. For all individual tax returns that filed Form 4562, Depreciation and Amortization, the Section 179 property deducted as an expense increased by 5.1% to \$49.8 billion for 2008. For 2009, when the maximum Section 179 deduction remained at \$250,000, the amount deducted for all returns decreased by 17.2% to \$41.3 billion. The amount deducted as Section 179 property on returns that had a Schedule C dropped 19.6% to \$16.2 billion between 2008 and 2009. For 2010, the amount taxpayers could deduct as section 179 property increased to \$500,000.

of 2017 (TCJA) increased the additional first-year depreciation deduction in IRC Section 168(k) from 50% to 100% for qualified property acquired and placed in service after September 27, 2017, and before January 1, 2023. The TCJA also expanded bonus depreciation to certain used property. TY 2018 was the first year that the TCJA impacted depreciation and, accordingly, constant dollar depreciation rose by 18.0% to \$49.6 billion. This represents the highest percentage real growth in depreciation for all 35 years included in this study. There was also a marked increase in constant dollar depreciation for TY 2021 when it rose 13.9% to \$59.5 billion.

Beginning with TY 1992, certain smaller businesses could elect not to itemize depreciation and other business deductions by filing Schedule C-EZ, Net Profit From Business, a simplified version of Schedule C, Profit or Loss From Business. (Schedules C and C-EZ are the sources of nonfarm sole proprietorship statistics.) However, for TY 2019, Schedule C-EZ was eliminated in accordance with IRC changes implemented by TCJA. Previously, for TY 2018, taxpayers could use Schedule C-EZ if they had business expenses of \$5,000 or less; used the cash accounting method; had no inventories; did not report a loss from the business; had only one business as a sole proprietor; and had no employees who were not required to file Form 4562, Depreciation and Amortization, for the business; claimed no deduction for home business expenses; and had no prior-year disallowed passive activity losses from the business. Since taxpayers using Schedule C-EZ did not itemize business deductions, the detailed deductions in Table 2, based only on Schedule C returns, are slightly understated and do not sum to the total deductions in Figure D.9

Profits and Losses

Total profits in current dollars decreased by 0.2%, from \$411.3 billion for TY 2021 to \$410.7 billion for TY 2022. Sole proprietorship profits (net income less deficit) decreased across more than half of sectors analyzed. The professional, scientific, and technical services sector reported the largest percentage of total profits of all nonfarm sole proprietorships, with 24.7% (\$101.6) billion), and the sector had a \$2.5 billion (2.5%) increase in profits for TY 2022 compared to the previous year. The second largest sector by profits, construction, reported an increase in profits over TY 2021, rising 7.5% to \$54.2 billion. The largest percentage increase in profits was realized in the arts, entertainment, and recreation sector, which increased 15.0% for a gain of \$2.0 billion. Figure D presents total profits for all industries (in both current and constant dollars) since TY 1988, while Figure F (for 2021 and 2022) presents profits by selected industrial sector and Figure G presents industrial profits as a percentage of total profits.10

In constant (2017) dollars, total profits decreased by 6.8% for 2022, going from \$373.2 billion in 2021 to \$347.9 billion

in 2022. Figure H shows net income less deficits as a percentage of business receipts for 1988 through 2022. In general, this percentage has increased over time from a low of 18.8% for 1988, the exceptions being the periods leading up to the recession in the early 2000s and the Great Recession, starting in 2008. For 2022, net income less deficits as a percentage of business receipts decreased from 22.0% in 2021 to 19.7% in 2022, the lowest it has been since 1990.

Limited Liability Companies

TY 2001 was the first year for which data became available on the number of Limited Liability Companies (LLCs) among nonfarm sole proprietorship returns. LLC entities have limited liability (like corporations), but they may be taxed as sole proprietorships (for which income and expenses flow through to the owner to be taxed), if owned by one individual. In 2001, there were a little over 126,000 sole proprietorship returns that indicated status as an LLC, or 0.7% of total sole proprietorship returns (Figure I). In contrast, for TY 2022, there were 3.5 million such sole proprietorships, which accounted for 11.4% of the total nonfarm sole proprietorship returns, a nearly 28-fold increase in the number of returns since 2001. The share of total nonfarm sole proprietorship business receipts attributed to LLCs also rose during this period, from approximately 2.3% in 2001 to 35.3% in 2022 (Figure J). Similarly, the portion of total net income (less deficit) of all nonfarm sole proprietorships attributable to LLCs increased, from 1.0% in 2001 up to 21.1% in 2022.

Summary

Business receipts for the 31.0 million returns with sole proprietorship activity for TY 2022 increased by 11.4% from TY 2021 to a level of \$2,080 billion. The largest industrial sector, based on business receipts, was the construction sector, accounting for \$377.1 billion in business receipts. The wholesale trade sector had the largest percentage increase in returns (14.4%), while the arts, entertainment, and recreation sector had the highest percentage increase in receipts (24.4%). Total nonfarm sole proprietorship profits for 2022 decreased 0.2% to \$410.7. The professional, scientific, and technical services sector had the largest profits of any sector, at \$101.6 billion, representing 24.7% of total sole proprietorship profits, followed by the construction sector, at \$54.2 billion or 13.2% of total profits.

Data Sources and Limitations

The 2022 sole proprietorship estimates are based on a stratified probability sample of unaudited Forms 1040, U.S. Individual Income Tax Returns, (including electronically filed returns) processed by the Internal Revenue Service during Calendar Year 2022. Returns in the sample were stratified based on: (1) the presence or absence of Schedule C, Profit or Loss From Business (Sole Proprietorship), or Schedule C-EZ, Net Profit From Business, and Schedule F, Farm Income and Expenses; (2) the larger of positive income or negative income (i.e., "adjusted gross income" before statutory adjustments); and (3) tax year. The returns were selected at rates that ranged from 0.1% to 100%. The 2022 nonfarm sole proprietorship data are based on a sample of 118,695 returns and a population of 31,361,397 returns. The corresponding data for 2021 were based on a sample of 124,469 returns and a population of 29,683,691

¹¹ The difference between the number of returns in the population and the total number of returns in Tables 1 and 2 is mainly due to returns in which Schedule C income was moved to other income or wages to avoid double counting of taxpayers for Gross Domestic Product calculations. In addition, data from amended and tentative returns are not reflected in these statistics.

returns. Figure L provides the indices used for creating constant dollar values.

Since the data presented in this article are estimates based on a sample of returns filed, they are subject to sampling error. To use the statistical data estimates provided, the magnitude of the potential sampling error must be known; coefficients of variation (CVs) are used to measure that magnitude. Figure K presents estimated coefficients of variation for total business receipts, total business deductions, depreciation, net income, and deficit by selected industrial sector. Generally, the smaller the coefficient of variation, the more reliable the estimate is judged

to be. The SOI Sampling Methodology and Data Limitations Section of the SOI Bulletin, available at http://www.irs.gov/pub/irs-soi/sampling.pdf, discusses the reliability of estimates based on samples and the use of coefficients of variation for evaluating the precision of estimates based on samples.

Adrian Dungan and Adam Snyder are economists with the Individual Special Studies Section. This article was prepared under the direction of Michael Strudler, Management and Program Analyst, Individual and Tax-Exempt Branch.

Table 1. Nonfarm Sole Proprietorships: Business Receipts, Selected Deductions, Payroll, and Net Income, by Industrial Sectors, Tax Year 2022

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

^{**} Data combined to prevent disclosure of taxpayer information.

^[1] Includes depreciation claimed on Form 8829, Expenses for Business Use of Your Home.

^[2] Interest paid is the sum of mortgage interest and other interest paid on business indebtedness.
[3] Payroll is the sum of salaries and wages plus the cost of labor reported as part of cost of sales and operations.

NOTE: Detail may not add to totals because of rounding.

Qualified business deduction * Estimate should be used with caution because of the small it	873,214	412,198	219,882	241,134	847,940	4,639,418	290,090	879,868	

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

^{*} Data combined to prevent disclosure of taxpayer information.

^[1] Total business deductions are before subtraction of nonallowable "passive" activity losses and any "passive loss" carryover from the prior years. However, these losses (after subtraction) and any carryover are reflected in net income or deficit. Therefore, total business receipts minus total business deductions may not always equal net income or deficit.

NOTE: Detail may not add to totals because of rounding.

^{*} Estimate should be used with caution because of the small number of returns on which it is based.

^{**} Data combined to avoid disclosure of information for specific taxpayers.

^[1] Total business deductions are before subtraction of nonallowable "passive" activity losses and any "passive loss" carryover from the prior years. However, these losses (after subtraction) and any carryover are reflected in net income or deficit. Therefore, total business receipts minus total business deductions may not always equal net income or deficit. NOTE: Detail may not add to totals because of rounding.

High-Income Tax Returns for Tax Year 2021

by Justin Bryan

or Tax Year (TY) 2021, there were just under 11.7 million individual income tax returns with an expanded income of \$200,000 or more, accounting for 7.3% of all returns filed for the year. Of these, 9,861 returns had no worldwide income tax liability, resulting in a 6.0% increase over the number of returns with no worldwide income tax liability for 2020. It was the third increase in a row, but well below the peak of 19,551 returns for TY 2009. This article presents detailed data for high-income returns for TY 2021 and summary data for TYs 1977–2020. Detailed data for the TYs 1974–2020 were published previously.

Changes in Tax Law

Major changes in effect for TY 2021 that influenced the data in this article are explained here. Public Law 117-2, commonly referred to as the American Rescue Plan (ARP) Act brought about many changes in the law for TY 2021. The ARP Act, enacted on March 11, 2021, expanded the child and dependent care tax credit for TY 2021 by making it refundable and larger for certain taxpayers. For 2021, the dollar limit on qualifying expenses for the child and dependent care credit increased to \$8,000 (previously \$3,000) for one qualifying person and \$16,000 (previously \$6,000) for two or more qualifying persons. The rules for calculating the credit also changed: the maximum percentage of qualifying expenses eligible for the credit was increased from 35% to 50%, along with the income limit at which the credit begins phasing out, \$125,000 (previously \$15,000). Additionally, for taxpayers who received dependent care benefits from their employer, the dollar limit of the exclusion amount increased for TY 2021 to \$10,500 (previously \$5,000). For married employees filing separate returns, the maximum amount increased to \$5,250 (previously \$2,500).

Another important feature of the ARP Act of 2021 was the enhancement of the child tax credit. The child tax credit was extended to qualifying children under age 18. Depending on adjusted gross income (AGI), a taxpayer received an enhanced

credit amount of up to \$3,600 for a qualifying child under age 6 and up to \$3,000 for a qualifying child over age 5 and under age 18. The enhanced credit amount began to phase out where modified AGI exceeded \$150,000 in the case of a joint return or surviving spouse, \$112,500 in the case of a head of household, and \$75,000 in all other cases. If a taxpayer (or a taxpayer's spouse if filing jointly) had a primary home in the United States for more than half of the year or was a bona fide resident of Puerto Rico in 2021, the child tax credit was fully refundable even if the taxpayer had no income. If the taxpayer did not meet either residency requirement above, then the child tax credit was a combination of a nonrefundable child tax credit and a refundable additional child tax credit, as was the case in TY 2020. The credit for other dependents was not enhanced and was figured as it was in TY 2020.

Lastly, the ARP Act of 2021 also provided certain self-employed individuals the opportunity to claim credits for up to 10 days of paid sick leave, and up to 60 days of paid family leave, if they were unable to work or telework due to circumstances related to the COVID-19 pandemic. Self-employed individuals claimed these credits for the period beginning on April 1, 2021, and ending September 30, 2021.

Income and Tax Concepts

Two income concepts are used in this article to classify tax returns as high-income: the statutory concept of AGI and the "expanded income" concept. The expanded income concept includes items reported on the tax return to obtain a more comprehensive measure of income than AGI. Specifically, expanded income is AGI plus tax-exempt interest, nontaxable Social Security benefits, the foreign-earned income exclusion, and items of "tax preference" for Alternative Minimum Tax (AMT) purposes less unreimbursed employee business expenses, moving expenses, investment interest expense to the extent that it does not exceed investment income, and miscellaneous itemized deductions.^{3, 4, 5}

The Tax Reform Act of 1976 requires annual publication of data on individual income tax returns reporting incomes of \$200,000 or more, including the number of such returns reporting no income tax liability and the importance of various tax provisions in making these returns nontaxable. The statutory requirement is contained in section 2123 of the Tax Reform Act of 1976 (90 Stat. at 1915).

See the References section for more details.

³ The definition of adjustments to AGI to obtain the expanded income given in the text is for the current year. See Appendix A for a discussion of AGI and expanded income and a list of adjustments covering all years since 1977.

⁴ See Notes to Appendix A, note A4.

Tax-exempt interest had to be reported on the individual income tax return starting with TY 1987 and is included in expanded income starting with that year. Beginning with TY 1991, tax-exempt interest was incorporated into the criteria used for sampling returns for Statistics of Income, thus increasing the reliability of the estimates of expanded income.

AGI and expanded income differed for 35.8 million (22.3%) of the 160.8 million individual income tax returns filed for TY 2021 (Figure A). This was a 0.6% decrease from the number of returns that differed for TY 2020. Expanded income exceeded AGI in 96.5% of these returns. The average difference between expanded income and AGI was \$11,614, and the median difference was \$7,741, down from \$12,557 and \$8,738 in TY 2020, respectively. Although expanded income is a more comprehensive measure of income than AGI, for some taxpayers the subtractions from AGI to arrive at expanded income exceeded the additions, resulting in expanded income that was less than AGI. Returns on which expanded income exceeded AGI were concentrated among returns with \$200,000 or less of AGI. For returns with more than \$200,000 of AGI and expanded income differing from AGI, a smaller fraction (86.9%) has expanded income greater than AGI than for returns with less than \$200,000 of AGI (97.9%).

There are also two tax concepts in this article used to classify returns as taxable or nontaxable: "U.S. income tax" and "worldwide income tax." U.S. income tax is total federal income tax liability, which includes the AMT, less all credits against income tax, and does not include payroll or self-employment taxes. To be considered taxable, a return had to have a positive income tax liability after accounting for all credits. A nontaxable return, on the other hand, could have either a zero or negative income tax liability after accounting for all credits (including refundable credits). Since the federal income tax applies to worldwide income and allows a credit (subject to certain limits) for income taxes paid to foreign governments, a return could be classified as nontaxable under the U.S. income tax concept even though income taxes had been paid to a foreign government. The worldwide income tax concept addresses this circumstance by adding back the allowable foreign tax credit and foreign taxes paid on excluded foreign-earned income to U.S. income tax.^{6,7} The sum of these two items is believed to be a reasonable proxy for foreign taxes paid.8

Figure A
Individual Income Tax Returns With Positive, Zero, and Negative U.S. Income Tax: Differences Between Adjusted Gross Income and Expanded Income, by Size of Adjusted Gross Income, Tax Year 2021

[Money amounts are in whole dollars]

Returns by tax status, size of adjusted gross income (AGI)	Total number of returns	Number of returns with difference between AGI and expanded income	Number of returns where expanded income is greater than AGI	Number of returns where AGI is greater than expanded income	Average difference of expanded income minus AGI	Median difference of expanded income minus AGI

\$200,000 or more	9,877	2,609	786	1,823	-71,972	-59,563

^[1] Includes returns with adjusted gross deficit.

Notes: Detail may not add to totals because of rounding. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of U.S. income tax. Source: IRS, Statistics of Income Division, Individual High-Income Tax Returns, October 2024

⁶ See Appendix B for a discussion of the tax concepts. In data published for years prior to 1989, either in articles presented in the Statistics of Income Bulletin or in chapters in Statistics of Income—Individual Income Tax Returns (see Reference section), the "U.S. income tax" concept was described as "total income tax," and the "worldwide income tax" concept was described as "modified total income tax."

The inclusion of foreign taxes paid on excluded foreign earned income, beginning with TY 1990, represents an improvement in the worldwide income tax concept. However, it also represents a slight break in the year-to-year comparability of data for worldwide income tax. Nevertheless, the number of returns with foreign taxes paid on excluded foreign-earned income is extremely small compared to the number of returns with the foreign tax credit.

⁸ Where foreign tax rates exceed U.S. rates, foreign tax credits will be less than foreign tax liabilities. In such cases, using foreign tax credits as a proxy for foreign tax liabilities understates worldwide income tax liability. In other cases, when foreign tax credits are for taxes paid on income from previous years, use of foreign tax credits as a proxy may overstate or understate worldwide taxes on current-year income.

Figure B shows a cross-tabulation of tax returns based on whether a return has positive, zero, or negative U.S. income tax liability and whether it also has positive, zero, or negative worldwide income tax. All returns with positive U.S. income tax liability have positive worldwide income tax liability; returns with zero U.S. tax liability have either positive or zero worldwide income tax liability; and returns with negative U.S. income tax liability have either positive or negative worldwide income tax liability. Just over one-third (35.0%) of the 160.8 million tax returns filed for TY 2021 had zero or negative U.S. income tax liability, and 93.4% of these returns had AGI of less than \$50,000. Less than 4 out of every 1,000 returns with zero or negative U.S. income tax liability had positive worldwide income tax liability, and 57.7% of these returns had an AGI of \$50,000 or more.

Number of High-Income Returns

For TY 2021, there were more than 11.5 million individual income tax returns with an AGI of at least \$200,000, and, likewise, just slightly less than 11.7 million returns with an expanded income of \$200,000 or more (Figure C). The number of returns with AGI above the \$200,000 threshold increased 22.0% from TY 2020 and accounted for slightly less than 7.2% of all returns for TY 2021. Similarly, the

returns with expanded incomes above the \$200,000 threshold increased 21.7% from TY 2020 and accounted for just under 7.3% of all returns for TY 2021.

The \$200,000 threshold for high-income returns is measured in current-year (nominal) dollars. Because it is fixed in nominal terms, as time passes, more and more tax returns have had incomes exceeding this threshold simply due to inflation. Therefore, to facilitate a comparison of tax returns across time, Figure C also shows what the \$200,000 threshold in 1976 would be each year after adjusting for inflation and the number and share of returns above this threshold. For TY 2021, this inflation-adjusted threshold was \$952,443. Since 1977, the number of returns with AGI above this inflation-adjusted threshold has increased at an annual rate of approximately 7.1%. In comparison, the total number of returns has increased 1.4% per year since 1977.

Adjusting for inflation, the number of returns for TY 2021 above the AGI threshold was 941,749 or 0.59% of all returns, up from 0.43% of all returns in TY 2020. Similarly, the number of returns for TY 2021 above the inflation-adjusted threshold using the expanded income concept was 948,158 or 0.59% of all returns, up from 0.43% of all returns in TY 2020. Since TY 1977, the number of returns with expanded income above this threshold has increased at an annual rate of approximately 6.5%.

Figure B
Individual Income Tax Returns With Positive, Zero, and Negative U.S. and Worldwide Income Tax: Number of Returns, by Size of Adjusted Gross Income, Tax Year 2021

Returns by U.S. tax status, size of adjusted gross income (AGI)	All returns	Returns with positive worldwide income tax	Returns with zero worldwide income tax	Returns with negative worldwide income tax

Footnotes at end of figure

Although the number of returns reporting incomes of \$200,000 or more generally increased annually from 1977–2021, the exceptions to this reflect the economic downturns in TYs 2001, 2002, 2008, and 2009. The general trend of a rise in the number of returns is similar when using the inflation-adjusted income threshold. However, the increases are

much smaller, and the number of returns above the inflation-adjusted threshold decreased in additional years, e.g., TYs 1980, 1981, 1987 (expanded income only), 1989, 1990 (AGI only), 1991, 1993, 2013, and 2016. Many of these years also coincided with economic downturns.¹⁰

Source: IRS, Statistics of Income Division, Individual High-Income Tax Returns, October 2024

The difference in the number of high-income returns between the two income concepts significantly decreased beginning with TY 1987, when AGI began to include 100% of long-term capital gains. This change in the definition of AGI made it more comparable to the expanded-income concept. In addition, due to the inclusion of tax-exempt interest in expanded income in TY 1987, expanded income for years after TY 1986 is not strictly comparable to expanded income for years before TY 1987.

¹⁹⁷⁶ as the base year. See footnote 9 of this article for further details.

Note: See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income

Nontaxable High-Income Returns

Of the 11.5 million income tax returns with an AGI of \$200,000 or more, 22,267 showed no U.S. income tax liability for TY 2021 (top panel of Figure D). Also, 29,044 of the 11.7 million tax returns with expanded income of \$200,000 or more had no U.S. income tax liability. This represents a 29.1% increase for high-AGI returns and a 1.0% increase for high-expanded-income

returns with no U.S. income tax liability from the corresponding numbers of nontaxable high-income returns for TY 2020.

Of the returns with an AGI of \$200,000 or more, 8,870 returns showed no worldwide income tax liability for TY 2021. Of returns with an expanded income of \$200,000 or more, 9,861 showed no worldwide income tax liability. This represents a 66.8% increase for high-AGI returns and a 6.0% increase for high-expanded-income returns with no worldwide income tax

^[1] Inflation-adjusted dollars were calculated using the U.S. Bureau of Labor Statistics' Consumer Price Index for urban consumers with 1976 as the base year. See footnote 9 of this article for further details. See Figure C, Column 6, for the yearly inflation-adjusted thresholds.

SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, October 2024

liability, compared to the number of returns in the same categories for TY 2020.

Tables 1 and 2 also show the number of all returns, taxable returns, and nontaxable returns cross-classified by broad

AGI and expanded-income size classes. Most returns fall in the same broad income-size class under both income concepts, but the number of nontaxable returns under the expanded-income concept is generally greater than under the AGI concept

NOTES: See Figure M for the derivation of U.S. income tax and worldwide income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. In order to maintain historical comparability, Tax Years 2007 and 2008 data were recalculated using the new criteria. However, 2007 and 2008 tables, published earlier, do not reflect these changes. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income.

in each income class over \$50,000. Furthermore, Tables 1 and 2 also show that there were 11.5 million returns with incomes of \$200,000 or more as measured by both AGI and expanded income, of which 18,995 returns had no U.S. income tax liability and 5,662 returns had no worldwide income tax liability.

Of the almost 942,000 returns with an AGI over the inflation-adjusted high-income threshold, 792 returns had no U.S. income tax liability in TY 2021, up 43.7% from the previous year (lower panel of Figure D), while 290 returns showed no worldwide income tax liability, up 67.6% from the number for TY 2020. Measured using expanded income, of the roughly 948,000 returns above the inflation-adjusted threshold, 710 returns had no U.S. income tax liability, up 27.2% from TY 2020, and 171 returns showed no worldwide income tax liability for TY 2020, up 21.3% over the previous year.

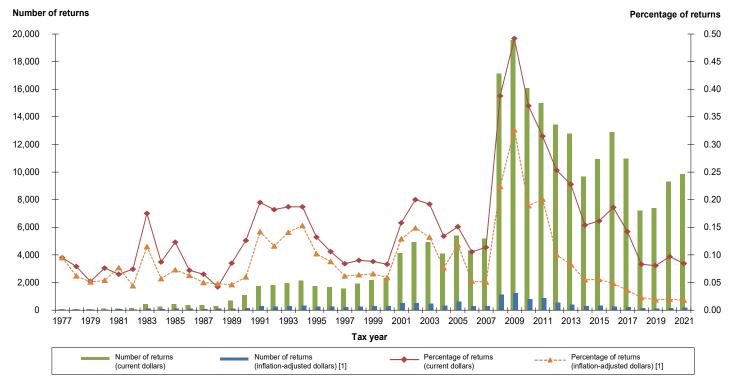

Moving from the nominal \$200,000 threshold to an inflation-adjusted threshold only slightly changes the share of high-income returns that have either no U.S. income tax liability, or no worldwide income tax liability. Using AGI, 0.19% of high-income returns had no U.S. income tax liability with a nominal \$200,000 threshold, while only 0.08% had no U.S. income tax liability for 2021 using an inflation-adjusted threshold. Similarly,

0.08% of high-income returns over the nominal threshold and 0.03% of high-income returns above the inflation-adjusted threshold had no worldwide income tax liability for the same year. When using expanded income with a nominal \$200,000 threshold, 0.25% of high-income returns had no U.S. income tax liability, and 0.08% had no worldwide income tax liability for 2021, while an inflation-adjusted threshold showed that 0.07% had no U.S. income tax liability and even fewer (0.02%) had no worldwide income tax liability.

Figure E shows the evolution of the number and percentage of returns with an expanded income of \$200,000 or more with no worldwide income tax. The number of returns above the threshold is read off the left vertical axis, and the percentage of returns above the threshold is read off the right vertical axis. Two series are shown for each measure, one using a nominal \$200,000 threshold and one using an inflation-adjusted threshold.

In this figure, the spread between the two shares was small for the late 1970s, showed an increase for the early 1980s, and then narrowed before widening again after TY 1988. The spread generally narrowed after TY 1993 but increased or stayed consistent from TYs 2002–2007. From TYs 2008–2017, the spread widened considerably. The gaps for TYs 2018-2021 (almost

0.07 percentage points for TY 2021) were considerably smaller than the previous ten years and more in line with most of the years in this study.¹¹

Reasons for Nontaxability

Taxpayers may have their tax liability reduced—possibly to zero or beyond—in numerous ways. These include claiming tax credits, which directly reduces an individual's tax liability; claiming various deductions, which reduces taxable income; and receiving income that is excluded from the calculation of taxable income.

It is possible for certain itemized deductions and certain exclusions from income to lead to nontaxability by themselves, but high-income returns are more often nontaxable for a combination of reasons, none of which alone would result in nontaxability. Moreover, some items, either singly or in combination, may eliminate "regular tax" liability (i.e., income tax excluding the AMT), but cannot eliminate an AMT liability, since these items give rise to adjustments or preferences for AMT purposes.

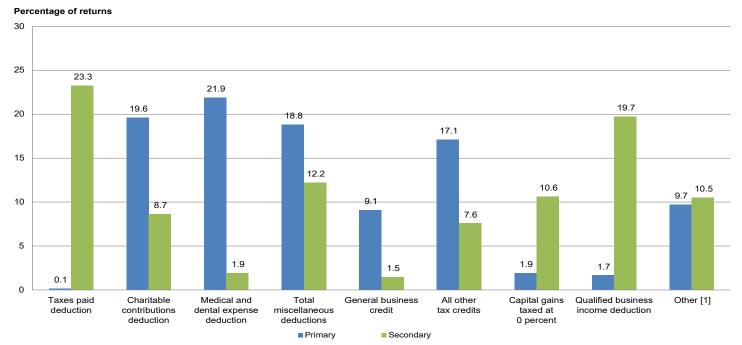

Because they do not generate AMT adjustments or preferences, tax-exempt bond interest (not including private activity bonds), itemized deductions for interest expenses, miscellaneous itemized deductions, casualty or theft losses,

and medical expenses (exceeding 7.5% of AGI) could, by themselves, produce nontaxability.

Due to the AMT exemption of \$114,600 for joint returns (\$73,600 for single and head-of-household returns and \$57,300 for returns of married taxpayers filing separately), a return could have been nontaxable even though it included some items that produced AMT adjustments or preferences.¹² Further, since the starting point for "alternative minimum taxable income" was taxable income for regular tax purposes, a taxpayer could have adjustments and preferences exceeding the AMT exclusion without incurring AMT liability. This situation could occur if taxable income for regular tax purposes was sufficiently negative due to itemized deductions exceeding AGI, such that the taxpayer's AMT adjustments and preferences are less than the sum of the AMT exclusion and the amount by which regular taxable income is below zero. Note that, because of the AMT, taxpayers may have found it beneficial to report additional deduction items on their tax returns, even if the items did not produce a benefit for regular tax purposes.

The most important item in eliminating tax on the 8,870 returns without any worldwide income tax and with AGI of \$200,000 or more was the medical and dental expense deduction. This pattern was the case in 21.9% (1,943) of those returns (Figure F). The next three categories that most frequently had

Figure F
Individual Income Tax Returns With Adjusted Gross Income of \$200,000 or More and No Worldwide Income Tax Liability: Percentage of Returns With Primary and Secondary Reasons for No Income Tax Liability, Tax Year 2021

^[1] Does not include returns where there was no secondary reason for nontaxability.

NOTES: Detail for primary reason for nontaxability may not add to 100% because of rounding. Detail for secondary reason for nontaxability will not add to 100% due to some returns not having a secondary reason for nontaxability. See Figure M for the derivation of worldwide income tax. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income.

SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, October 2024

Note that before 1991, the listed number of nontaxable returns with expanded income of \$200,000 or more was estimated based on samples that were differently constructed than samples made after 1991. Year-to-year differences in the number and percentages of nontaxable returns with expanded income of \$200,000 or more may have represented sampling variability, in addition to actual changes in the number of such returns. Beginning with TY 1991, nontaxable returns with expanded income of \$200,000 or more were sampled at higher rates, which reduced the sampling variability of these returns and, therefore, provided improved estimates. Thus, the data for returns prior to 1991 are not entirely comparable with data for more recent years.

¹² The AMT exclusion phases out above certain levels of "alternative minimum taxable income" based on filing status. However, since taxpayers will have some AMT liability in the phase-out range, the phase-out income is not relevant for nontaxable, high-income returns.

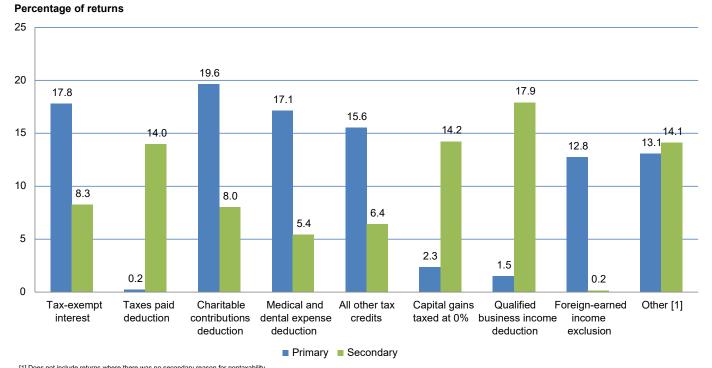

the largest primary effect in eliminating taxes were: 1) charitable contributions deduction (19.6% or 1,742 returns); 2) total miscellaneous deductions, which includes deductions such as the gambling loss deduction, or property income, casualty, and theft deduction (18.8% or 1,672 returns); and 3) all other tax credits (17.1% or 1,518 returns). All other tax credits, which includes refundable credits, increased significantly in TY 2021 due to the expansion of the child and dependent care credit and the child tax credit in the ARP act of 2021. The taxes paid deduction, which was limited to a maximum of \$10,000 starting in TY 2018, was the most important item on just 0.1% of returns. However, this item was the most frequent secondary reason in reducing regular tax liability for high-AGI returns with no worldwide income tax (23.3% or 2,064 returns). The next three categories that most frequently had the largest secondary effect in eliminating taxes were: 1) qualified business income deduction (19.7% or 1,750 returns); 2) total miscellaneous deductions (12.2% or 1,085 returns); and 3) capital gains taxes at 0% (10.6% or 944 returns).

Of the 9,861 returns without any worldwide income tax and with expanded incomes of \$200,000 or more, the most important item in eliminating tax, on 19.6% of returns, was the charitable

contributions deduction (Figure G). This number was up significantly from TY 2020 (15.2%) where it was third largest primary reason for eliminating tax. This increase was mostly due to the temporary suspension of AGI limitation for certain cash charitable contributions that began in TY 2020 and continued for TY 2021.¹³ The next three categories that most frequently had the largest primary effect on taxes were: 1) the exclusion for interest income on state and local government bonds ("taxexempt interest") (17.8% or 1,757 returns); 2) the medical and dental expense deduction (17.1% or 1,689 returns); and 3) all other tax credits (15.6% or 1,534 returns). The item that was most frequently the secondary reason in reducing regular tax liability on high-expanded-income returns with no worldwide income tax was qualified business income deduction (17.9% or 1,767 returns). The next three categories that most frequently had the largest secondary effect in eliminating taxes were: 1) capital gains taxed at 0% (14.2% or 1,404 returns); 2) taxes paid deduction (14.0% or 1,379 returns); and 3) tax-exempt interest (8.3% or 815 returns).

Tables 7 and 8 in this article also classify tax returns by items having the largest and second largest effects in reducing or eliminating U.S. income tax or worldwide income tax, respectively.

Figure G
Individual Income Tax Returns With Expanded Income of \$200,000 or More and No Worldwide Income Tax Liability: Percentage of Returns With Primary and Secondary Reasons for No Income Tax Liability, Tax Year 2021

NOTES: Detail for primary reason for nontaxability may not add to 100% because of rounding. Detail for secondary reason for nontaxability will not add to 100% due to some returns not having a secondary reason for nontaxability. See Figure M for the derivation of worldwide income tax.

See Appendix A: Income Concepts of this article for a discussion of expanded income.

SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, October 2024

¹³ The suspension of the AGI limitation for TY 2020 began with the passage of the Coronavirus Aid, Relief, and Economic Security (CARES) Act on March 27, 2021, and was extended for TY 2021 with the passage of the Consolidated Appropriations Act, 2021 (CAA) on December 27, 2021. It's possible that some taxpayers, who filed prior to passage of this law, may have had to file an amended TY 2020 return to take advantage of the temporary suspension of the AGI limitation. These returns were not included for these statistics.

For returns on which each of the largest effects was identified, the tables show each of the second largest effects as well. ¹⁴ For example, Table 7 shows that on taxable returns with some U.S. income tax and AGI of \$200,000 or more, the qualified business income deduction was the most important item in reducing U.S. income tax liability 23.5% of the time. Where this was the primary item, the foreign tax credit was the second most important item 17.5% of the time, and on 35.9% of returns, there was no second largest item. The foreign tax credit was the main factor contributing to nontaxability for both AGI returns (56.5% of the time) and expanded income returns with no income tax (49.5% of the time). However, in determining worldwide tax, this no longer has an effect (by definition).

Figure H presents another way of illustrating the importance of selected tax provisions in reducing or eliminating income tax liability. It shows the number of high-expanded-income tax returns with no worldwide income tax utilizing selected tax provisions by the percentage of income reduced. For example, the itemized deduction for medical and dental expenses reduced income by greater than 60% of expanded income on 1,424 (or 14.4%) of the 9,861 returns, but there were no medical and dental expense

deductions on 6,577 returns or 66.7%. Conversely, the taxes paid deduction reduced expanded income between 0 and 30% on 6,125 (or 62.1%) of the 9,861 returns, but reduced income by greater than 60% on only 8 returns. Tax preferences excluded from AGI, which included tax-exempt interest, reduced income by greater than 60% of expanded income on 1,361 (or 13.8%) of the 9,861 returns. In total, 3,941 returns (40.0%) had their income reduced by tax preferences excluded from AGI. Only the taxes paid deduction (6,181 returns or 62.7%) and the charitable contributions deduction (5,437 returns or 55.1%) were claimed by more returns. Tables 9 and 10 report finer detail of the frequencies of returns by the percentage of income reduced for high income filers with no U.S. income tax and filers with no worldwide income tax, respectively.

Distribution of Tax Levels

Figure I presents the distribution of high-expanded-income returns by the ratio of "adjusted" worldwide taxable income to expanded income. Taxable income was adjusted for this figure by subtracting the deduction equivalents of tax credits and other items from taxable income. ¹⁵ Thus, the figure shows the extent

Figure H
Individual Income Tax Returns With Expanded Income of \$200,000 or More and No Worldwide Income Tax: Number of Returns With Itemized Deductions, Credits, and Tax Preferences, by Percentage of Income Reduced, Tax Year 2021

		No		r of returns on which uced by percentage o

Disaster loss deduction	9,861	9,836	0	0	25
Qualified business income deduction	9,861	7,126	2,601	59	76
Section 199A reduction	9,861	9,861	0	0	0

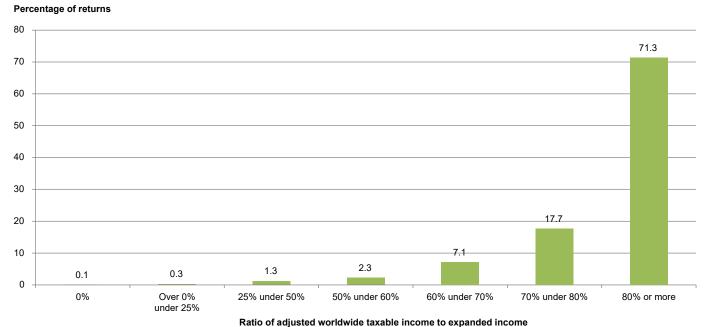

Notes: Detail may not add to totals because of rounding. See Appendix A: Income Concepts of this article for a discussion of expanded income. See also Appendix B: Tax Concepts for a discussion of worldwide income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect.

Source: IRS, Statistics of Income Division, Individual High-Income Tax Returns, October 2024

¹⁴ Tax-exempt interest and the foreign-earned income exclusion were not included in Tables 7 and 8 as possible tax effects before TY 1994. Thus, caution should be exercised in making comparisons with data prior to 1994 and after 1993.

See Appendix B for a description of how the deduction equivalent of credits was computed.

Figure I
Individual Income Tax Returns With Expanded Income of \$200,000 or More: Distribution of Returns by Ratio of Adjusted Worldwide
Taxable Income to Expanded Income, Tax Year 2021

NOTES: Detail may not add to 100% because of rounding. See Appendix A: Income Concepts of this article for a discussion of expanded income. See also Appendix B: Tax Concepts for a discussion of worldwide income tax.

SOURCE: IRS. Statistics of Income Division, Individual High-Income Tax Returns. October 2024

to which expanded income is reduced before taxes are imposed on the remaining income. The figure illustrates three important facts about high-income tax returns:

- Only a small portion of all high-income taxpayers did not pay any worldwide income taxes (0.1%).
- Another group of high-income taxpayers—small, but larger than the nontaxable group—could offset a very substantial fraction of income before being subject to tax. This type of high-income taxpayer pays income tax equal to only a small share of his or her income. Such taxpayers may be called "nearly nontaxable." About 0.3% of high-expanded-income taxpayers with at least some worldwide tax liabilities were able to reduce their adjusted taxable income to less than 25% of their expanded income.
- Overall, most high-income taxpayers were subject to tax on a large share of their income (71.3% of high-expandedincome taxpayers had adjusted taxable income equal to 80% or more of expanded income; and 98.3% had adjusted taxable income equal to 50% or more of expanded income).

Figure J shows the distribution of individual income tax returns by worldwide income tax burden. It classifies tax returns by size of expanded income and effective tax rate, i.e., income tax as a percentage of expanded income. This figure illustrates the wide dispersion of effective tax rates for all returns. For example, 2.8% of returns with expanded incomes of \$200,000

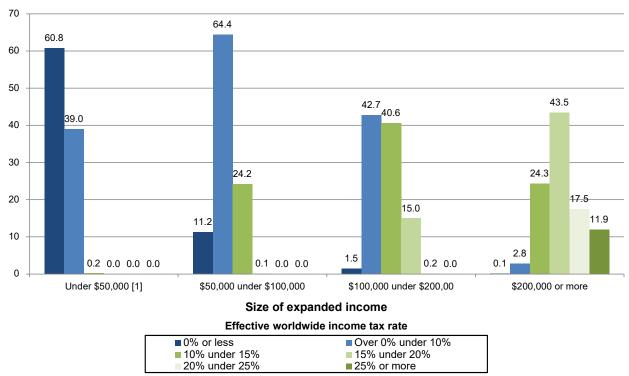

or more had a positive amount of worldwide income tax that constituted less than 10% of their expanded income; 11.9% of returns with expanded incomes of at least \$200,000 had an effective tax rate of 25% or more. Also, 17.5% had effective tax rates between 20 and 25%. In contrast, only 0.2% of taxpayers with an expanded income between \$100,000 and \$200,000 had effective tax rates of 20% or more.

Characteristics of High-Income Tax Returns

By comparing high-income nontaxable returns with taxable returns, some of the different characteristics of nontaxable returns can be deduced. For example, under the expandedincome concept, returns without worldwide income tax were much more likely (39.8%) than taxable returns (21.7%) to have tax-exempt interest, and when they did, the average amount for nontaxable returns (\$190,744) was much higher than the average amount for all taxable returns (\$17,236) (Figure K). They were also much more likely to have medical and dental expense deductions (33.3% vs. 2.6%) and nontaxable Social Security benefits (36.3% vs. 21.1%). Conversely, nontaxable returns (49.0%) were much less likely than high-income taxable returns (85.0%) to have income from salaries and wages. Tables 5 and 6 show the aggregate frequencies and amounts of all the types of income, the items of tax preference, and the various deductions, credits, and income taxes on high-income returns under both the AGI and expanded income concepts with respect to returns with and without U.S. income tax and worldwide income tax, respectively.

Figure J
Individual Income Tax Returns: Distribution of Returns by Effective Worldwide Income Tax Rates Within Expanded Income Size Groups, Tax Year 2021

Percentage of returns

More Detailed Data for 2021

Tables 1 through 12 present data based on income tax returns for TY 2021, mainly those with income of \$200,000 or more (measured in current-year dollars) of AGI or expanded income. Most of the data are shown for taxable and nontaxable returns, both separately and combined. The odd-numbered tables use the U.S. income tax concept to classify returns as taxable or nontaxable, whereas the even-numbered tables use the worldwide income tax concept. In summary, the tables show:

- The numbers of returns under the two tax concepts, crossclassified by broad AGI and expanded-income size classes (Tables 1 and 2);
- The distributions of taxable income as a percentage of AGI and expanded income (Tables 3 and 4);
- The frequencies and amounts of various sources of income, exclusions, deductions, taxes, and tax credits, as well as the relationship between the two income concepts (Tables 5 and 6);

- The frequencies with which various deductions and tax credits are the most important and second most important items in reducing (or eliminating) income tax (Tables 7 and 8);
- The frequencies with which various itemized deductions, tax credits, and tax preference items occur as certain percentages of income (Tables 9 and 10); and
- The distributions of effective tax rates, i.e., income tax under each definition as a percentage of income, as well as the percentage of income that is subject to preferential tax rates, by broad income-size classes (Tables 11 and 12).

Appendix A: Income Concepts

Congress wanted data on high-income taxpayers classified by an income concept that was more comprehensive than Adjusted Gross Income (AGI), but that was based entirely on items already reported on income tax returns. To derive such an income concept, it was necessary to begin with a broad, inclusive concept of income. AGI must then be compared to this broad income concept, and the differences (both additions and subtractions) from items reported on tax returns identified.

This appendix begins by defining "Haig-Simons income," a very broad concept of income used by economists and others as a standard. AGI is then compared to Haig-Simons income, and the major differences between the two income concepts are listed. The next section defines "expanded income," a more comprehensive income measure than AGI, based entirely on tax return data, and the final section explains in some detail the adjustment to income for investment expenses.

Haig-Simons Income

The broadest measure of annual income generally used by economists and others is defined as the value of a household's consumption plus the change, if any, in its net worth. This income concept is referred to as Haig-Simons income or H-S income after the two economists who wrote extensively about it [A1]. The H-S income of a household that consumed \$25,000 and saved \$2,000 in a year would be \$27,000. Alternatively, the H-S income of a household that consumed \$25,000 and had no additions to savings but had assets that declined in value by \$1,000 in a year, would be \$24,000.

H-S income consists of three broad components: labor income, capital income (income from assets), and income from transfer payments. The major elements of each of these three components are as follows:

Labor income—This includes all forms of employee compensation (including wages and salaries), employee fringe benefits (such as employer-provided health insurance and accrued pension benefits or contributions), and the employer share of payroll taxes (such as Social Security taxes). Labor income also includes the labor share of self-employment income. Expenses of earning labor income would be deducted in arriving at H-S income. Deferred labor income (such as pension benefits) would be counted in the year it was earned, rather than in the year it was received.

Capital income—This includes all income from assets, including interest, dividends, rents, royalties, accrued capital gains (whether realized or not), the capital income share of self-employment income, and the rental value of consumer durables (most importantly, the rental value of owner-occupied housing). Capital income is measured in real (inflation-adjusted) terms and is the net of real, economic depreciation and all other expenses (which could exceed capital income).

Transfer payments—These include payments in cash such as Social Security benefits, workers' compensation, unemployment benefits, Aid to Families with Dependent Children, and noncash benefits (such as Medicare, Medicaid, and the Supplemental Nutrition Assistance Program).

For purposes of tax analysis, H-S income should be measured on a pretax basis (the amount that would be earned if there were no federal income tax in place). Most items of income are unaffected, or little affected, by the income tax and so these are reported on a pretax basis. However, certain income items from tax-preferred sources may be reduced because of their preferential treatment. An example is interest from tax-exempt state

and local government bonds. The interest rate on tax-exempt bonds is generally lower than the interest rate on taxable bonds of the same maturity and risk, with the difference approximately equal to the tax rate of the typical investor in tax-exempt bonds. Thus, investors in tax-exempt bonds are effectively paying a tax, referred to as an "implicit tax," and tax-exempt interest as reported is measured on an after-tax, rather than a pretax, basis. Income from all tax-preferred sources should be "grossed up" by implicit taxes to measure H-S income properly.

Adjusted Gross Income

AGI is the statutory definition of income for U.S. income tax purposes. AGI differs from H-S income by excluding some components of H-S income and by allowing accelerated business deductions and deductions unrelated to income, but also by disallowing or limiting certain expenses of earning income and certain losses. In addition, AGI is not "grossed up" for implicit taxes.

The components of H-S income excluded from AGI include most employee fringe benefits, the employer share of payroll taxes, accrued but deferred employee compensation, accrued but unrealized real capital gains, the rental value of consumer durables, nontaxable Social Security benefits, most other cash transfers, all noncash transfers, and the real income of borrowers due to inflation [A2].

Depreciation and certain other expenses allowed in determining AGI may be accelerated (relative to economic depreciation and other costs) in the early years of an investment, thus understating investment income. In later years, however, investment income in AGI will be overstated because depreciation and other accelerated expenses will then be understated. AGI also excludes some expenses not related to earning income, such as contributions to self-employed retirement (Keogh) plans, deductible contributions to Individual Retirement Arrangements, the portion of Social Security contributions for self-employed workers that is analogous to the employer share of such contributions for employees, and contributions to medical savings accounts.

AGI generally exceeds H-S income to the extent that expenses of earning income and losses are limited or disallowed. Most of the expenses of earning income are deductible from AGI in calculating taxable income, but only if the taxpayer "itemizes" deductions. Expenses incurred in the production of income that are itemized deductions include expenses attributable to a taxpayer's (passive) investments (as opposed to active participation in a trade or business, for example), including, but not limited to, interest expense incurred in connection with investments in securities [A3].

Although net capital losses reduce economic income, only the first \$3,000 of net realized capital losses may be deducted in computing AGI. Any additional realized losses must be carried forward to future years. In a somewhat similar manner, passive losses (from investments in a trade or business in which the taxpayer does not materially participate) can also reduce economic income, but, in computing AGI, they can only be deducted from passive income from other, similar

investments (although a larger amount may be deducted when the losses are from rental real estate activities).

AGI can also exceed H-S income because of differences in the timing of income between the two concepts. For example, a taxpayer may realize more capital gains in a year than they accrue in capital gains. Since AGI includes only realizations of capital gains, whereas H-S income includes only accruals, AGI in this circumstance would exceed H-S income.

Finally, just as AGI understates the income of borrowers due to inflation, it overstates the income of lenders, who include bond owners and owners of bank deposits.

Expanded Income

Expanded income is meant to be a measure of income that is conceptually closer to H-S income than AGI, but which is derived entirely from items already reported on income tax returns. Figure L shows the adjustments made to AGI to arrive at expanded income. Since the definition of AGI was changed by legislation several times since 1977, and certain reporting requirements also changed, the adjustments differ over the years, as indicated for each item [A4]. Most of these adjustments are relatively straightforward, but the adjustment for investment requires some explanation.

Investment Expenses

In measuring H-S income, it generally would be appropriate to deduct all expenses incurred in the production of income,

Figure L

Derivation of Expanded Income from Adjusted Gross Income, Tax Years 1977–2021

Adjusted gross income (AGI)

PLUS:

- o Excluded capital gains (tax years prior to 1987)
- o Tax-exempt interest (1987 and later tax years)
- o Nontaxable Social Security benefits (1988 and
- Tax preferences for alternative minimum tax purposes [A5]
- o Foreign-earned income exclusion (1990 and later tax years)

MINUS:

- o Unreimbursed employee business expenses (tax years prior to 2018) [A4]
- o Nondeductible rental losses (Tax Years 1987 and 1988)
- o Moving expense deduction (Tax Years 1987 through 1993) [A4]
- o Investment interest expense deduction to the extent that it does not exceed investment income
- Miscellaneous itemized deductions not subject to the 2%-of-AGI floor (1989 and later tax years)

EQUALS: o Expanded income

Note: Footnotes to this figure are included with the footnotes to Appendix A: Income Concepts, which also includes an explanation of adjusted gross income and expanded income.

Source: IRS, Statistics of Income Division, Individual High-Income Tax Returns, October 2024

including those related to any income-producing investments, without limit. Investment expenses that exceed investment income would then represent net economic losses. However, such a liberal deduction for investment-related expenses is not necessarily correct when not all income items have been included currently. (Investment income includes interest, dividends, and capital gains.)

If all income has not been included currently, full deduction of investment expenses might represent a mismatching of receipts and expenses and might result in understating income. For example, if a taxpayer borrowed funds to purchase securities, net income would be understated if the taxpayer deducted all interest payments on the loan but did not include as income any accrued gains on the securities. A similar mismatching of income and expenses would occur if investment expenses that should properly be capitalized were deducted when paid. In these instances, a more accurate measure of income might be obtained by postponing the deduction of the expense until the income was recognized for tax purposes.

Additional problems are created when a person with a loan has both income-producing assets, such as securities, and non-income-producing assets, such as a vacation home or yacht. It is not possible to determine what portion of the interest expense should be attributed to taxable income-producing assets, and, therefore, ought to be deductible against the gross receipts from such taxable assets. Because of these problems, it has been necessary to set arbitrary limits on the amount of investment expenses that are deductible in calculating expanded income.

Investment expenses that have not been deducted in determining AGI generally can appear on a federal individual income tax return in two places. Investment interest expense is accounted for in the calculation of the itemized deduction for interest paid. Deductible investment interest expense is a separate part of the total interest deduction. Other investment expenses, such as management fees, are included in the miscellaneous category of itemized deductions [A5]. Beginning with TY 1987, most types of income-producing expenses included as miscellaneous itemized deductions are only deductible to the extent that their total exceeds 2% of AGI. These were eliminated from Schedule A for TY 2018. To determine expenses that should be deductible in calculating an approximation of H-S income, investment expenses have been defined as deductible investment interest expenses. Other investment expenses could not be separated from the remainder of miscellaneous deductions. Hence, they have not been used in the adjustment for investment expenses.

To the extent that interest expenses do not exceed investment income, they are generally allowed as a deduction in the computation of deductible investment interest expenses and thus expanded income. Investment interest expenses that exceed investment income are not deductible in calculating expanded income. One consequence of this definition is that investment expenses can never turn positive investment income into investment losses. Generally, allowing investment expenses to offset all investment income is generous and tends

to understate broadly measured income. However, in some instances, limiting investment expenses to investment income may overstate income by disallowing genuine investment losses.

Notes to Appendix A

- [A1] Haig, Robert M. (ed.) (1921). "The Federal Income Tax." Columbia University Press, and Simons, Henry C. (1938). "Personal Income Taxation." University of Chicago Press.
- [A2] Borrowers receive income due to inflation because the real value of debt is reduced by inflation. Even though inflation may be anticipated and reflected in interest rates, tax deductions for nominal interest payments overstate interest costs because part of these payments represents a return of principal to the lender, rather than interest.
- [A3] See references and footnote A4.
- [A4] For TY 1977, about 50% of net long-term capital gains were included in AGI. In TY 1978, the inclusion ratio was changed to 40%. This inclusion ratio remained unchanged through TY 1986. Beginning with TY 1987, there was no exclusion allowed for capital gains in computing AGI, and thus this adjustment was not made in computing expanded income for returns for years after TY 1986.

Beginning in TY 1987, taxpayers were required to report on their federal income tax returns the amount of their tax-exempt interest income from state and local government bonds. Since TY 1987, tax-exempt interest has been included in expanded income.

Taxpayers are also required to report Social Security benefits. Since TY 1988, nontaxable Social Security benefits have been included in expanded income. However, if none of a taxpayer's Social Security benefits are taxable, then gross Social Security benefits are not required to be shown on the income tax return. In such instances, which generally only affect lower- and middle-income taxpayers, Social Security benefits are not included in expanded income.

The subtraction of unreimbursed employee business expense (prior to its elimination after TY 2017) and the moving expense deduction is to make the concept of expanded income comparable to that for years prior to TY 1987. All current year moving expenses beginning with TY 1994 were deducted in the calculation of AGI as a statutory adjustment. Due to subtracting nonlimited miscellaneous deductions and not subtracting the nondeductible rental loss for TY 1989, the expanded income concept for TY 1989 is not strictly comparable to expanded income for TY 1988. Nor is the expanded

income concept for TY 1990 strictly comparable to expanded income for TY 1989 because of the addition of the foreign-earned income exclusion. Specific details on the definition of expanded income for any given year are available in the reports and publications found in the References section.

[A5] Some income deferrals and accelerated expense deductions may also be involved in income or losses from rental property, from royalties, from partnerships, and from S Corporations, only the net amounts of which are included in AGI.

Appendix B: Tax Concepts

This appendix discusses in more detail two tax concepts used in this article. The first section provides a summary of the U.S. taxation of worldwide income and the foreign tax credit. The two tax concepts used in this article are then defined in the next section. That section is followed by an explanation of deduction equivalent of credits and other items. A final section discusses the possible implications of the use of unaudited tax return data for this article.

U.S. Taxation of Worldwide Income and the Foreign Tax Credit

Citizens and residents of the United States, regardless of where they physically reside, must generally include in income for federal income tax purposes income from all geographic sources. Thus, for example, dividends and interest received from a foreign corporation or income earned working abroad is subject to federal income tax in the same manner as income received from sources inside the United States [B1]. Income from sources outside the United States may also be subject to tax by foreign governments.

To reduce, if not eliminate, the possibility of double taxation of the foreign-source income of U.S. citizens and residents, the federal income tax allows a credit for income taxes paid to foreign governments. The foreign tax credit is generally limited to the amount of (pre-credit) U.S. tax liability attributable to foreign-source income. This limit prevents the foreign tax credit from offsetting the U.S. tax on U.S.-source income.

Due to taxing citizens and residents on a worldwide basis but allowing a foreign tax credit, some federal income tax returns may report substantial income but little or no U.S. tax liability after credits. This may occur, for example, if a tax-payer has income only from foreign sources, e.g., the taxpayer may live abroad the entire year and have no income-producing assets in the United States. It may also occur if a taxpayer has foreign-source income that exceeds a net loss from U.S. sources and pays income taxes comparable to the U.S. tax to a foreign government [B2].

For taxpayers with income from foreign sources, these procedures understate the taxpayers' true worldwide income tax liabilities and effective income tax rates. For such taxpayers, it does not seem appropriate to classify U.S. income tax credits for foreign tax payments as reducing tax liabilities. This is particularly true for tax filers who appear to be nontaxable because

they do not have any U.S. tax liability, but who have paid foreign income taxes. A more accurate measure of overall income tax burden, as well as the number of nontaxable returns, can be obtained by considering all income taxes—U.S. as well as foreign. Thus, a second tax concept, worldwide income tax, has been used in addition to the traditional U.S. income tax.

Two Tax Concepts

Two tax concepts are used in this article to classify tax returns as taxable (i.e., returns showing an income tax liability) or nontaxable (i.e., returns showing no income tax liability) and to measure the tax burdens on taxable returns: U.S. income tax and worldwide income tax. Worldwide income tax is defined for purposes of this article as U.S. income tax, *plus* the foreign tax credits reported on the U.S. income tax return, and foreign taxes paid on excluded foreign-earned income (obtained from Form 1116, Foreign Tax Credit). The amount of the foreign tax credits

Source: IRS, Statistics of Income Division, Individual High-Income Tax Returns, October 2024

and foreign taxes paid on excluded foreign-earned income is used as a proxy for foreign tax liabilities [B3]. The relationship of U.S. income tax to tax items reported on individual income tax returns, and to worldwide income tax, is shown in Figure M.

Comparing Exclusions, Deductions, Tax Credits, and Special Tax Computations

To compare the importance of various exclusions, deductions, tax credits, and special tax computations (such as the alternative minimum tax on tax preferences), the different types of items must be placed on the same basis. One way of doing so is to calculate the size of the deduction that would reduce (or increase) income tax by the same amount as a tax credit or special computation. This amount is called the "deduction equivalent" of the tax credit or special computation.

The deduction equivalent of a tax credit or a special tax computation is the difference between the taxable income that, using the ordinary tax rate schedules, would yield the actual tax before the provision in question is considered and the actual tax after the provision. For example, the "deduction equivalent of all tax credits" is equal to the difference between "taxable income that would yield income tax before credits" and "taxable income that would yield income tax after credits."

Using this method of equating the value of deductions, exclusions, credits, and special tax computations, the order in which the various credits and special tax computations are calculated may affect the value of their deduction equivalents. Because the tax rate schedules are progressive, with successive increments to income taxed at successively higher tax rates, the deduction equivalent of the credit converted last to a deduction equivalent will be larger (for the same amount of a credit) than the item converted first, unless all relevant taxable income amounts are within a single tax-rate bracket.

The deduction equivalents of tax credits shown in Tables 9 and 10 were computed by assuming that deductions and exclusions reduce taxes before credits. As a result, the deduction equivalent of tax credits may be overstated.

Unaudited Data

Tax return data used for Statistics of Income (SOI) have been tabulated as they were reported on tax returns filed with the Internal Revenue Service (IRS). Certain obvious arithmetic errors have been corrected and certain adjustments have been made to achieve consistent statistical definitions. Otherwise, the

data have not been altered. Specifically, the data do not reflect any changes that either may have or could have been made because of IRS audits. While this is true of data throughout the entire SOI program, it is particularly relevant for high-income tax returns. Because of the greater complexity of these returns, there is a higher probability of error and a broader scope for disagreement about the proper interpretation of tax laws.

The fact that the data have been drawn from unaudited returns is of even greater importance for those high-income returns that are nontaxable. Almost any audit changes would make such returns taxable. Even where the tax consequences are minor, such returns could be reclassified from nontaxable to taxable, thereby changing the counts of nontaxable returns.

Notes to Appendix B

- [B1] An exception is that certain income earned abroad may be excluded from AGI. Any foreign taxes paid on such income are not creditable against U.S. income tax. The tables in this article include such excluded income in expanded income. Foreign taxes paid on such income are reflected in worldwide income tax, as discussed later.
- [B2] Although the foreign tax credit is an item of tax preference for AMT purposes, taxpayers below the AMT exclusion thresholds, or with preferences or deductions not subject to AMT, could completely offset pre-credit U.S. income tax liability with foreign tax credits.
- [B3] Where foreign tax rates exceed U.S. rates, foreign tax credits will be less than foreign tax liabilities. In such cases, using foreign tax credits as a proxy for foreign tax liabilities understates worldwide income tax liability. In other cases, when foreign tax credits are for taxes paid on income from previous years, use of foreign tax credits as a proxy may overstate or understate worldwide taxes on current-year income.

Justin Bryan is an economist with the Individual and Tax-Exempt Special Studies Section. This article was prepared under the direction of Michael Strudler, Technical Project Manager, Individual and Tax-Exempt Branch.

^[1] Includes returns with adjusted gross deficit or with negative expanded income.

SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, October 2024.

NOTES: Detail may not add to totals because of rounding. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of worldwide income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect.

 $^{^{\}star}$ Estimate should be used with caution because of the small number of sample returns on which it is based.

^{**} Data combined to avoid disclosure of information for specific taxpayers.

^[1] Section 179 of the Internal Revenue Code permits certain taxpayers to elect to deduct all or part of the cost of certain qualifying property in the year they place it in service, instead of taking depreciation deductions over a specified recovery period.

^[2] Includes tax-exempt interest and tax preference items subject to alternative minimum tax.

^[3] Excess advance premium tax credit (PTC) repayment is included in income tax before credits on Form 1040 but is subtracted here because it is not considered a part of income tax since it is not based on earned income.

^[4] For prior-year returns only.

NOTES: Detail may not add to totals because of rounding. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of U.S. income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect.

Equals: Expanded income	11,687.201	7,108,982,727	11,677.340	7,105,967,996	9,861	3,014,731

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

^{**} Data combined to avoid disclosure of information for specific taxpayers.

^[1] Section 179 of the Internal Revenue Code permits certain taxpayers to elect to deduct all or part of the cost of certain qualifying property in the year they place it in service, instead of taking depreciation deductions over a specified recovery period.

^[2] Includes tax-exempt interest and tax preference items subject to alternative minimum tax.

^[3] For returns without worldwide income tax, refundable credits offset the amount of foreign taxes paid.

^[4] Excess advance premium tax credit (PTC) repayment is included in income tax before credits on Form 1040 but is subtracted here because it is not considered a part of income tax since it is not based on earned income.

^[5] For prior-year returns only.

NOTES: Detail may not add to totals because of rounding. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of worldwide income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect. SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, October 2024.

^{**} Data combined to avoid disclosure of information for specific taxpayers.

NOTES: Detail may not add to totals because of rounding. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of U.S. income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect.

SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, October 2024.

^[1] For taxable returns only, this does not include any possible effect on AMT.

^[2] Investment interest expense deduction only has an effect when using the adjusted gross income concept.

^[3] All other tax credit includes the portion of refundable credits that are used to offset income tax before credits. For Tax Year 2021, this included the refundable child tax credit or additional child tax credit and refundable child and dependent care credit.

^[4] Tax-exempt interest, foreign-earned income exclusion, AMT tax preference, and nontaxable Social Security benefits only have an effect when using the expanded income concept.

^[5] Less than 0.05%.

^{**} Data combined to avoid disclosure of information for specific taxpayers.

^[1] For taxable returns only, this does not include any possible effect on AMT.

^[2] Investment interest expense deduction only has an effect when using the adjusted gross income concept.

^[3] All other tax credits includes the portion of refundable credits that are used to offset income tax before credits. For Tax Year 2021, this included the refundable child tax credit or additional child tax credit and refundable child and dependent care credit.

^[4] Tax-exempt interest, foreign-earned income exclusion, AMT tax preference, and nontaxable Social Security benefits only have an effect when using the expanded income concept.

^[5] Less than 0.05%.

NOTES: Detail may not add to totals because of rounding. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of worldwide income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect. SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, October 2024.

NOTES: Detail may not add to totals because of rounding. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of U.S. income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect.

^{**} Data combined to avoid disclosure of information for specific taxpayers.

NOTES: Detail may not add to totals because of rounding. See Appendix A: Income Concepts of this article for a discussion of adjusted gross income and expanded income. See also Appendix B: Tax Concepts for a discussion of U.S. income tax. Starting in 2009, the portion of refundable credits that offset income taxes before credits was factored in to determine tax liability. As a result, data may not be comparable to data in Tax Years 2007 and 2008 published tables. Prior to 2007, the portion of refundable credits used to offset income taxes had no effect.

SOURCE: IRS, Statistics of Income Division, Individual High-Income Tax Returns, October 2024.

^[1] Includes returns with adjusted gross deficit or with negative expanded income.

^[2] Less than 0.05%.
