CORPORATION SOURCE BOOK OF STATISTICS OF INCOME

INDUSTRY STATISTICS AND THEIR LIMITATIONS

The industry groupings used for Statistics of Income, Corporation Income Tax Returns, conform with the 1963 Standard Enterprise Classification issued by the Office of Statistical Policy and Management Information Systems, Office of Management and Budget. The structure of the classification follows closely along the lines of the Standard Industrial Classification, which is designed as a means of classifying separate establishments rather than the companies of which establishments are part. Some departures from the enterprise classification system are made for Statistics of Income for the finance industries in order to reflect particular provisions of the Internal Revenue Code.

Even though the classification system is designed to apply to the company rather than the establishment, its application to corporation income tax return statistics has limitations. For corporations, industry statistics are generally governed by the returns of the larger companies. Since a return is classified by industry based on the activity accounting for the largest percentage of total receipts, this means that large corporations with diversified activities are included in only one industry even though many of their business operations are unrelated to the industry in which they are classified. It should therefore be noted in using the Source Book, especially for recent years, that statistics for an industry may be either understated by amounts reported by corporations whose principal activity lies elsewhere, or overstated by amounts reported by corporations classified in the industry but having substantial operations in other industries.

To an extent the effect of diversification on the statistics is mitigated by the reporting unit used by most corporations. Separate returns are generally filed for each member of a group of related companies even though for general financial purposes reports are filed for each group as a whole. When separate returns are filed, it becomes possible to classify each company within a group by industry. Also, when a company's operations are diversified among related minor industries, the effects of diversification may be mitigated somewhat when data for the related minor industries are accumulated into the major industries featured in the published Statistics of Income reports.

NOTES

1. Income subject to tax

For most corporations, income subject to tax consisted of net income less statutory special deductions. However, certain of these deductions (a) could exceed net income resulting in no income subject to tax and (b) could occur on returns without net income and therefore without income subject to tax. Other exceptions applied to life and mutual insurance companies, related investment companies, real estate investment trusts, and to Small Business Corporations electing to have net income taxed through shareholders. See "Income subject to tax" in Explanation of Terms, STATISTICS OF INCOME--1967, CORPORATION INCOME TAX RETURNS.

2. Unused investment credit

Revisions were made to the Unused investment credit statistics too late to be included in the Source Book. Total Unused investment credit for 1967 amounted to $1,859,389 thousand. See, STATISTICS OF INCOME--1967, CORPORATION INCOME TAX RETURNS, for industry and various size distributions.

3. Income year 1967 covers corporation accounting periods ended July 1967 through June 1968.

4. See the report STATISTICS OF INCOME--1967, CORPORATION INCOME TAX RETURNS, for a discussion of these statistics including:

Changes in law

6. Certain revisions to selected balance sheet statistics, summarized in the table below, were made too late to be incorporated in the Source Book. Since the revisions are presented only for the finest level of detail, the user must carry the adjustments shown in column (5) to the appropriate totals and subtotals (i.e., Insurance carriers (major group 50); Finance, insurance, and real estate; and U.S. total).
